## ABOUT AXIOM

Axiom is an IT Solutions and Infrastructure Management company. We offer solutions based on entire IT Infrastructure life cycle management including analysis, designing, planning, integration, support and management. Axiom provide solutions and services that are relevant, innovative, timely and affordable which are always exceeding customer expectations. Axiom assures value addition and value for money proposition to its clients.

Core management team with 20+ years of real life IT expertise in designing and implementation, with innovative IT solutions, we can help organizations to increase efficiency, improve performance and build competitive advantage, also help to speed up and improve Business Processes.

Our rich experience of managing wide range of projects, Axiom's capability to design, implement and support of complex technology solutions can serve clients business critical needs and transform visions to value.

Axiom's System Integration portfolio consists of Infrastructure Setup, Consolidation, Data Management Solutions, Network Security, Data Center Designing & Transformation, Business Continuity, Enterprise Mobility Management, Cloud Computing, Collaboration, IT Asset Management, IPv6 Transition and Physical Security and Surveillance solutions.

Our IT Services includes Infrastructure Maintenance Services, Work Space Management, Remote Infrastructure Management and many more.

Demand for outsourcing IT Infrastructure Services continues to drive rapid technological advances for enterprise segment. Axiom has rich experience and expertise in supporting IT Infrastructure Management Services to enhance your growth.

Axiom has strong bonding with partners and alliances, we leverage on their domain expertise which enables us of assuring latest, improved solutions and 24 X 7 business continuity to our clients.

Our team has experience in implementing passive cabling in large organisations with well-defined processes as per international standards.

### Active Networks

We analyse the requirements and design the scalable and resilient network architecture. Our expert and certified resources help you in optimising the network and improving the network performance covering network technologies like switching and routing.

### Server & End Point Computing Devices

Axiom has deep experience and expertise in server capacity planning, integration, implementation to meet your computing requirements. We offer rack-mount and blade server solutions to meet your business and availability requirements.

We transform your end user computing environments by partnering with leading international OEM's providing wide range of desktops, notebooks, tablets and thin clients.

### Storage

We offer storage infrastructure design based on SAN, NAS, iSCSI, storage management, hierarchical storage management, archiving.

## IT INFRASTRUCTURE CONSOLIDATION

One of the top business challenges confronting CIO's and IT managers today are managing cost effective utilization of IT infrastructure, responsiveness and flexibility in supporting new business objectives. The virtualization buzz word is now old in the industry but still not fully implemented seamlessly in all domains of IT infrastructure like compute, storage, networks and end-points. It is an important aspect of designing an approach for the virtualization journey for an enterprise.

Axiom has deep knowledge and expertise in virtualization eco-system and would be your key partner in embarking this journey. We offer complete solutions covering Compute, Storage, Network and End Point Virtualisation.

## SOFTWARE DEFINED NETWORKING (SDN)

The advent of server virtualization has led to requirements for larger VLAN enabled layer 2 networks segments in order to provide IP address consistency when moving virtual workloads between physical servers. In both enterprise and service provider data centers the use of VLANs to provide this layer 2 network segmentation is running into the following challenges:

- Scalability limitations within multi-tenant clouds due to the limitation of the number of isolated network domains (4096 VLANs) and MAC addresses that can be delivered by a physical network infrastructure
- Complete and secure segregation for multi-tenant networks
- The need for network adjacencies to span across physical servers, networks and between data centers including network services without downtime or network redesign

SDN is the way to handle such challenges without any much disruption in network architecture. It not only addresses the above mentioned challenges but can also integrate your applications directly with network layer to get better performance and resiliency.

Axiom can support designing of your SDN strategy to take your IT infrastructure to next level.

### Data Management

Axiom takes the policy-based approach to manage the flow of an information

## AXIOM'S EDGE

- Innovative technology solutions aligned with business cases
- True business enabler
- Delivering entire IT infrastructure life cycle solutions
- Value for money proposition
- Highly committed core team with 20+ years of rich experience in IT
- Single point of contact for customers by providing end to end solutions
- Expertise in project management & execution
- Power of partnership and alliance
- Consulting approach
- Use of best industry practices

## IT SOLUTIONS

### IT INFRASTRUCTURE SETUP

#### Passive Networks

Axiom design and delivers passive network solutions to cater your voice, data, and video requirements by implementing on best of the breed structure cabling solutions in the industry.

system's data throughout its life cycle starting from creation, access management, backup, archive and gets deleted when it becomes obsolete. Axiom has rich experience in deploying storage gears leveraging on its business associations with industry best product companies.

## NETWORK SECURITY

At Axiom, network and data security is an important and essential part of our solution offering and we protect networks from all possible threats & benefit our customers by protecting critical business resources complying with best practices and industry regulations.

### Network Security offerings:

- Firewall and intrusion prevention systems (IPS)
- Secured network connectivity
- Multi- factor authentication
- Security and vulnerability assessment
- Penetration testing
- Data leak prevention (DLP)

## DATA CENTER TRANSFORMATION

Axiom has rich experience in strategizing data center transformation. We provide leading edge data center transformation solutions and services spanning entire solution life cycle.

### Data Center Transformation offerings:

- Data center security and compliance
- Virtualization and data center automation
- Environmental management and energy efficiency
- Application virtualization, consolidation, migration and hosting
- Managed services development and implementation

## BUSINESS CONTINUITY

Business continuity plans will keep your company up and running through interruptions of any kind like power failures, IT system crashes, natural disasters etc. It is an important consideration for an organization to revisit and test your BCP/DR strategy in view of changing landscape of business requirements.

### Important phases of BCP

- Project management and initiation
- Business impact analysis (BIA)
- Recovery strategies
- Plan design and development
- Testing, maintenance, awareness and training

Axiom can design complete BCP and DR Solutions which addresses both physical and IT environments ensuring critical data, applications and complete systems are protected.

## ENTERPRISE MOBILITY MANAGEMENT

EMM is an emerging discipline within the enterprise that has become increasingly important over the past few years as more workers have bought smart phone and

tablet computing devices and have sought support for using these devices in the workplace.

At Axiom we can help you to plan, design, and implement a successful enterprise mobility strategy. We provide solutions for enterprise mobility which allows the management and security of mobile applications, data and devices in the workplace.

### EMM offerings:

- Mobile device management
- Mobile application management
- Mobile information management

## CLOUD COMPUTING

Cloud computing provides a variety of computing resources , from servers and storage to enterprise applications such as email, security, backup and voice, all delivered over the Internet. The Cloud delivers a hosting environment that is immediate, flexible, scalable, secure, and available while saving money, time and resources

### Cloud Services offerings:

- Software as a service (SaaS)
- Platform as a service (PaaS)
- Infrastructure as a service (IaaS)

### Deployment Models:

- Public Cloud
- Private Cloud
- Hybrid Cloud

At Axiom we offer complete Cloud Computing solutions which covers entire process of sizing, designing, implementation, migration and support. We match your business needs with the appropriate enterprise solution.

## COLLABORATION

### Unified Communication

At Axiom we design cutting edge Unified Communication solutions for all business vertical which enables, quick and correct business decisions, improves the speed of business process and increase the overall operational efficiency, minimises the travel, telephone and other collaboration expenses.

Broadly our Collaboration Services offering include assessment, planning, design, deployment and manage.

## IT ASSET MANAGEMENT

Axiom offers IT Asset Management solution which allows you to actively manage the entire asset life cycle and align service resources with ITIL to optimize your IT investments. We also analyse the harvesting potential of your hardware and software resources.

## IPv6 TRANSITION

With the ever-increasing number of new devices being connected to the Internet, the need arose for more address space available (in IPv6 class) and hence the transition to IPv6 is one of the top CIO initiatives in the industry.

Axiom offers complete solution of IPv4 to IPv6 transition and assist customers with readiness to IPv6.

### IPv6 offerings:

- IPv6 Readiness assessment
- IPv6 Design
- IPv6 Transition planning
- IPv6 Strategy
- IPv6 Testing
- IPv6 Transition and management

## IT SERVICES

### IT Infrastructure Maintenance Services

Axiom's dedicated team of IT experts take care of the smooth functioning of all your IT resources with round the clock hands and feet support.

We can help clients by providing resident engineers as on need basis.

Axiom offers comprehensive and non-comprehensive maintenance contracts with strong OEM support.

### Work Space Management

Works Space Management or Facility Management is the service which manages enterprise IT infrastructure from an availability, manageability and performance perspective.

At Axiom these services are designed to fulfil customer IT requirements from L1 to L3 categories, availability reporting and periodic call analysis. These services are delivered through the options of SLA based or time and manpower based support.

### Work Space Management offerings:

- Service desk management
- Vendor management
- IT asset management
- Technical hardware management
- Server management
- Desktop management

- Storage management
- Network management
- Messaging management
- Data base management
- Data center management

### Remote Infrastructure Management Services

RIM enables efficient delivery of services and improves overall business performance.

Our remote IT infrastructure management services can help design, build, run and manage your IT infrastructure services in a flexible manner that allows for better integration with the existing processes and resources.

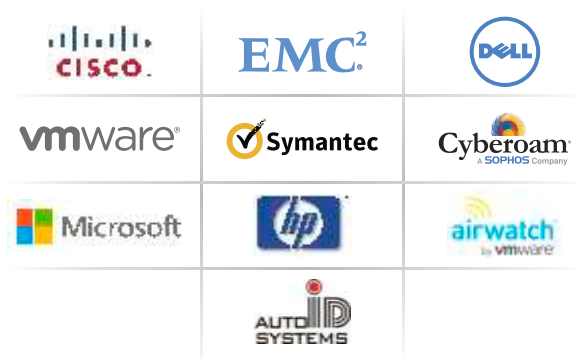

All the services mentioned in Workspace Management plus we provide following additional services under RIM

### RIM offerings:

- Proactive monitoring of server and network devices
- Application support
- IT security management
- Antivirus & patch management
- Software licence management
- End to end incident and problem management

Through our strategic alliance partners, we provide RIM services that reflect global standards of quality and processes.
